Skills

Languages: Python, C/C++, Javascript, Java, Solidity, SQL

Technologies & Tools: Flask, ReactJS, PostgreSQL, Docker, Google Cloud Platform, Firebase, Supabase

Work Experience

HackSkill, Ghaziabad

Apr 2025 - Present

Technical Member

Part-time

- Built the platform's interactive in-browser code editor, reducing code execution errors by **25%** and enabling smoother practice sessions for over **300+ users**.
- Revamped the Product pages by restructuring layouts and implementing a responsive UI, improving load times by **30%** and increasing user click-through by **15%**.
- Optimized frontend rendering and reduced script overhead, lowering interaction latency by **20%** across key pages.
- Collaborated with a 3-4 member technical team to design, test, and deploy new features, improving development cycle efficiency by **10–15%**.
- **Skills:** Python, JavaScript, TypeScript, Web Development, GitHub

Education

SRM Institute of Science and Technology

Jun 2024 - May 2028

B.Tech in Computer Science and Engineering

Relevant Coursework: Object Oriented Programming, Data Structures and Algorithms, Operating Systems, Computer Architecture, Digital Image Processing

Project Work

- **Pokémon Battle Simulator:** Built a full-featured turn-based battle simulator using Flask and JavaScript, implementing complete Pokémon mechanics (type effectiveness, STAB, crits, animations, sound FX). Delivered a responsive and interactive battle UI that improved user engagement by **40%** during internal testing. **Technologies:** Python, Flask, JavaScript, HTML/CSS, PokeAPI
- **Online OD Management System:** Developed a production-ready OD automation platform during a 24-hour hackathon, enabling students and teachers to manage OD requests with attachment support, comments, secure auth, and dashboards. Reduced manual OD processing effort by **70%** and cut approval times from hours to minutes. **Technologies:** Flask, Python, Tailwind CSS, Supabase Auth & PostgreSQL, ScrollCue.js, Vercel
- **Veritas-AI — Misinformation & Authorship Detection Platform:** Engineered a full-stack AI system using React + TypeScript and a Python microservice. Integrated Google Gemini for AI-authorship detection and Cloud Vision for image forensics, enabling **real-time credibility scoring** and reducing article analysis time by **85%**. **Technologies:** React, TypeScript, Tailwind, Python Flask, BeautifulSoup, Google Gemini AI, Google Vision API, Firebase
- **Parallel Image Processing with Intel oneAPI DPC++:** Implemented grayscale, edge detection, and blur filters with SYCL/DPC++ and benchmarked against OpenCV's CPU implementation. Achieved **8x–15x** speedups on Intel Arc A770 while profiling performance with Intel VTune and Advisor. **Technologies:** C++, Intel oneAPI DPC++, SYCL, OpenCV, Intel VTune, Intel Advisor

Awards and Certificates

- **CS50P: Introduction to Programming with Python** Completed Harvard's project-based Python programming course, demonstrating strong foundations in algorithms, data structures, OOP, file I/O, testing, and problem-solving.
- **Quantum Computing Program — Womanium x WISER** Participated in a global program introducing core concepts of quantum mechanics, quantum algorithms, qubits, superposition, and real-world quantum applications.
- **Postman API Fundamentals Student Expert** Earned certification for mastering API concepts, HTTP methods, authentication, API testing, writing test scripts, and designing requests using Postman.
